

Ipswitch Analytics

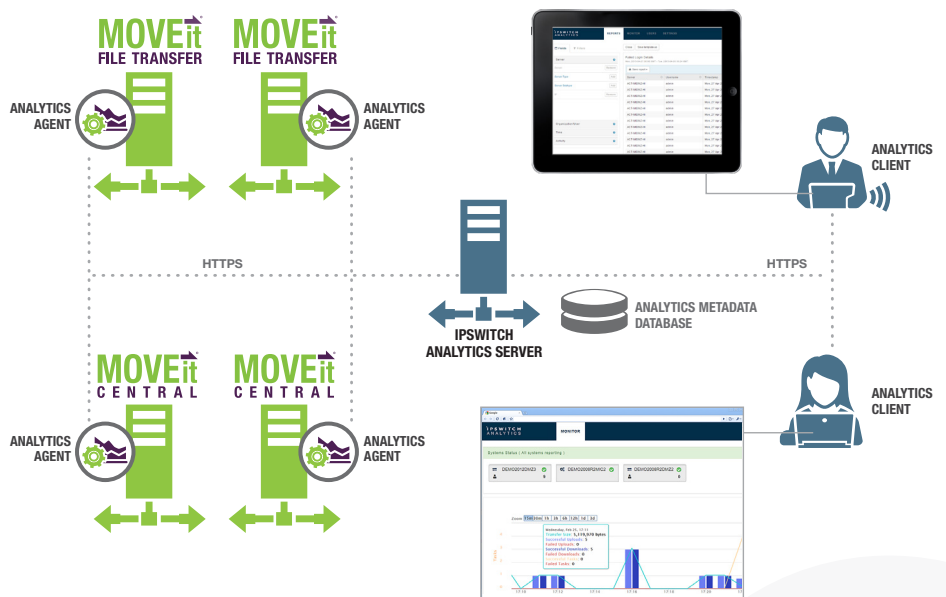

Automate Reporting and Monitoring for MOVEit MFT

Ipswitch Analytics is a flexible reporting and monitoring solution for MOVEit Managed File Transfer that ensures reliable, cost-effective, and auditable file transfers between employees, customers and trading partners. Whether you want to improve end-to-end performance and reliability, enable end-users to self-manage their file transfers, or reduce compliance costs, Ipswitch Analytics provides the insight you need.

- ✓ **Monitor file transfer activity and track performance.**
Track MOVEit performance indicators such as failed transfers by end-point, peak load performance, and total throughput trends.
- ✓ **Automate report creation and distribution for SLA and policy compliance.**
Customise reports, establish distribution lists with fine-grained access control and schedule auto-generated reports for delivery. Email alerts are sent to authorised users as reports are generated.
- ✓ **Manage workflow, file transfer, security and audit activity in one place.**
A single view of all MOVEit File Transfer (DMZ) and MOVEit Central Servers activity. Manage key parameters for all file transfer processes such as transfer activity, user access, encryption, and file formatting.
- ✓ **Simplify the audit process.**
Instantly validate all MOVEit activity with a single consolidated view. Create custom reports or use over 50 out-of-the-box templates. Drag-and-drop elements to organise presentation of key metrics to validate compliance with SLA, regulatory and corporate policies.

Ipswitch Analytics Architecture

Ipswitch Analytics accesses and consolidates data from all MOVEit File Transfer (DMZ) and MOVEit Central servers via a co-located Ipswitch Analytics Server Agent. Authorised users monitor MOVEit activity in popular web browsers from any device.

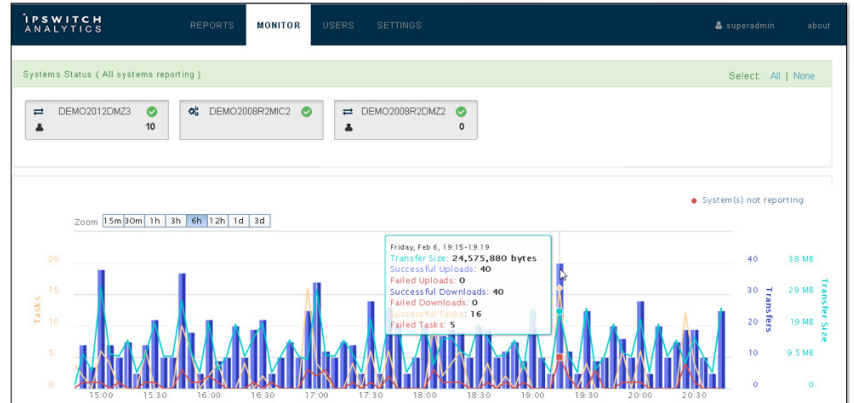

"Analytics allows us to more easily create KPI reports to management and deliver customised well designed reports to precisely display information needed to make data-based decisions. I can monitor trends with Ipswitch Analytics: specifically I monitor growth in number of MOVEit users by business unit quarter by quarter."

– File Transfer Administrator & Team Lead, oil and gas company

Features and Capabilities

- **Interactive Activity Monitor** – Key performance indicators are dynamically updated including, throughput, transfer outcomes, and automated tasks.
- **Report Templates** – Over 50 out-of-the-box templates to manage workflows, transfers, security and audits. Easy creation of reports by starting from pre-defined templates.
- **Report Builder** – Create customised report templates to manage presentation of data and gain insight.
- **Consolidated Reporting** - View data consolidated from all MOVEit File Transfer (DMZ) and MOVEit Central Servers.
- **Advanced Scheduler** – Automate report generation, distribution, and notification based on defined schedules.
- **Role-based Access Control** – Administrators have fine-grained access control by assigning roles to each user. Roles limit access to features, such as ability to create custom reports, schedule report generation, or user access to reports. Roles include: Systems Administrator; Creator, Partner, and Reader.
- **Policy Management** – Create policies to manage user access. Restrict user's ability to view data associated with defined organisations, servers, or users.
- **Lightweight Server Agent** – Access and consolidate data from any MOVEit File Transfer (DMZ) and MOVEit Central servers via a co-located Ipswitch Analytics Server Agent.
- **Browser-based UI** – Ipswitch Analytics browser-based UI can be accessed by any authorised user from any device or desktop via popular web browsers. The Ipswitch Analytics HTML 5 interface allows dynamic update of data and offers a drag-and-drop user experience.

The screenshot shows the 'REPORTS' tab with a 'Failed Login Details' report for the period Mon, 2015-04-27 00:00 GMT - Tue, 2015-04-28 18:24 GMT. The report table is as follows:

"Ipswitch Analytics is useful for trends and managing performance of the entire MOVEit system. For example, I need to find out how many files are transferred in one month, tasks executed, and file size and total bandwidth being used. With Analytics I can automate what I used to do manually: consolidate data in log files and calculate totals of key indicators."

– Systems Administrator, Global Retailer

MOVEit Managed File Transfer

MOVEit is an automated file transfer system that lets you manage, view, secure and control all file transfer activity through a single system. You will always know where your files are with predictable, secure delivery and extensive reporting. MOVEit reduces the need for IT hands-on involvement and allows for user self-service as needed. MOVEit, available on premise or in the Cloud, is comprised of MOVEit File Transfer (DMZ) Server and MOVEit Central. MOVEit add-ons include MOVEit Ad Hoc, MOVEit Mobile, MOVEit APIs, and high availability and failover deployment options.
