Collaboration Without Compromise

GoDrive by GoAnywhere™ is an on-premise solution that provides Enterprise File Sync and Sharing (EFSS) services for your employees and partners. **Starting with 10 FREE Users**, GoDrive files and folders are easily shared between users with advanced collaboration features including file revision tracking, commenting, trash bin, media viewing and synchronization with Windows and Macintosh devices.

See How Easy It Is!

Sharing files is simple with GoDrive. Employees can quickly invite authorized users to work with their shared folders and files using the provided browser interface. Collaboration features include:

Share Files

- Easily drag-n-drop files between the desktop and GoDrive folders

- Automatic email invitations to shared users

- Enter file comments, as well as review comment history from other users

- Organize files into user-defined folders and subfolders

- View thumbnail images of graphic files

- Search for files and folders

Monitor Sharing

- User can monitor shared files via activity streams

- Recieve email notices when shared files are downloaded or modified by others

- View and recover prior versions of files

Manage Access

- Lock files restricting access

- Revoke sharing of folders and files as needed

- Place files into a recycle bin for future recovery

- Manage shared folder access with granular permissions

- View history of when files are downloaded, uploaded and modified

GoDrive by GoAnywhere runs on multiple platforms including Windows, Linux, AIX, IBM i, Solaris and UNIX

How GoDrive Works

These screenshots illustrate what administrators see when using GoDrive.

Administration

Included with GoAnywhere MFT™, GoDrive provides a browser-based interface for administrators to easily manage users, security settings and shared folders.

- Set disk quotas and view disk usage
- Deactivate and wipe GoDrive folders from stolen or lost end-user devices

Security ▶▶

GoDrive provides end-to-end encryption for sensitive files. Since no files are stored in the cloud, your organization maintains local control to meet compliance requirements.

In addition to the full complement of security features in GoAnywhere MFT, GoDrive includes:

- The ability to set granular permissions at the folder, subfolder and individual file level
- Dual-factor PIN authorization for device registration
- AES 256-bit encryption on files synced to GoDrive devices

Logging and Reporting ▶▶

Capturing detailed audit log information and exporting for reporting purposes is a cornerstone of GoAnywhere MFT. GoDrive logs each time a file is uploaded, downloaded, edited, shared, commented on, and deleted.

Sync Client

The GoDrive Sync Client for Windows and Macintosh will synchronize your files from the GoDrive folder on your workstation with the GoAnywhere server. Files automatically appear on each of your registered devices, as well as the Web Client, allowing you to access your files from any internet connected computer.

Sharing files with others is a snap using GoDrive. We even give you 10 FREE Users to get started. No strings attached!

About Linoma Software

Founded in 1994, Linoma Software provides innovative technologies for protecting sensitive data and automating data movement. Linoma Software serves more than 3,000 customers around the world including corporations, non-profit organizations, and government entities.
