SecureMail
by GO ANYWHERE

Perform ad-hoc file transfers with automatic email notifications and secure HTTPS links.

Outlook plug-in included

A Secure Alternative to Emailing Files

The Secure Mail module in GoAnywhere MFT™ allows employees and other authorized users to easily send files (packages) to other individuals whenever they need to. Because it is much more secure than traditional email, and doesn't limit the file sizes or types, the Ad-Hoc Secure Mail module eliminates the need for PC file transfer tools. The Secure Mail module is one more step to ensure compliance throughout your organization.

See How Easy It Is!

Here are just a few ways that the Secure Mail module makes ad-hoc file transfers both simple and secure:

- Files are transferred over a secure HTTPS connection, with no restriction on file size or type.

- A unique URL link is randomly generated for each recipient using a universally unique identifier (UUID).

- System-generated or user-specified passwords can also be added for additional security without recipients needing to worry about keys or certificates.

- Package expiration dates and maximum download limits can be set by the sender.

- Senders can choose to receive notifications when packages are read.

- Organizations can use customizable templates to tailor emails with their company logo, colors, fonts, etc.

- Audit trails are kept of all package activity (e.g. when sent, when opened, when downloaded, etc.)

▲ Launch a Secure Mail File Transfer

Secure mail packages can be sent from either Outlook 2010/2013 or through an intuitive browser-based interface in GoAnywhere MFT with several customizable options.

GoAnywhere Secure Mail runs on multiple platforms including Windows, Linux, AIX, IBM i, Solaris and UNIX

LINOMA
SOFTWARE

How Ad-Hoc Secure Mail Works

These screenshots illustrate what users and recipients will see when using the Ad-Hoc Secure Mail module.

Email Notification ▶▶

Each recipient of a Secure Mail package will receive a notification via email. The notification will show the message subject, a summary of the file names and a link for downloading the files in the package. If certified delivery is requested, then the recipient will be required to create an account before the package can be opened.

Secure Delivery

The following file(s) have been sent to you from kharris@example.com. To download, please click on the following link.

Click here to download the file(s) listed below

OrdersQ1.csv   444.46 KB
OrdersQ2.csv   69.99 KB
PriceList.xml   70.12 KB

If the link above does not open, please copy and paste the following URL into your browser:
https://localhost/pkg?token=d911a876-dc78-4298-b324-9aab75fbb09e

This email is confidential and is intended solely for the use of the named addresses.
This notification has been sent to you by GoAnywhere.

Secure Download and Reply ▶▶

When a recipient clicks on the link in the notification email, it will open the download page over secure HTTPS protocol where they can choose to view or download the files. Recipients can respond and attach their own documents using the same secure protocol.

Secure Mail Dashboard

Users can work with their Secure Mail messages including their Inbox, Drafts and Sent items from an intuitive browser-based dashboard. Users will be able to see which files have been sent, whether the recipient has viewed or downloaded the file, and other logging details. In addition, users can maintain an address book to keep track of frequently used contacts or email groups.
