

# VARONIS EXPRESS RISK ASSESSMENT

Want to know where your biggest data security threats are?  
We'll show you.

## **EXPRESS RISK ASSESSMENT**

Security is at the top of everyone's mind: without proper insight into where sensitive data lives and who has access to it, organizations are at significant risk from external and internal threats. We've made our Express Risk Assessment **completely free** for a limited time. We'll outline your problem areas, **prioritize risk**, and give concrete steps to take to **improve your data security**.

## **HOW DOES IT WORK?**

Varonis engineers will assess the security of your unstructured data by collecting and analyzing metadata from your environment (CIFS data available on NAS devices and file servers) and give you a comprehensive report identifying high risk areas, exposed sensitive data, out of control processes, and more.

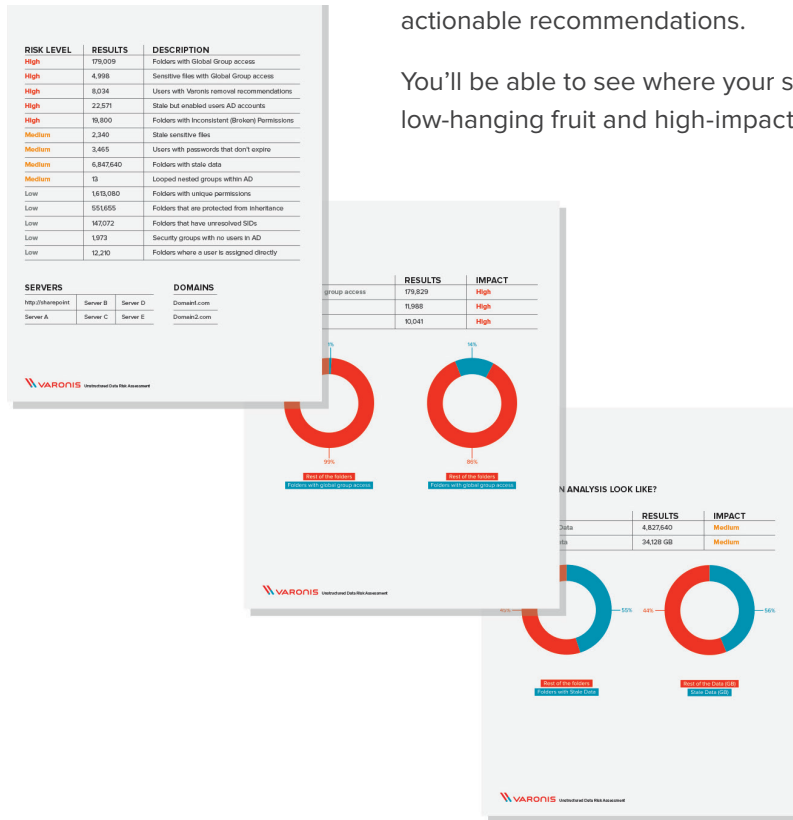

- Discover and isolate in-scope infrastructure
- Identify and prioritize at-risk areas
- Enumerate and assess accessibility and usage
- Install appropriate assessment technologies
- Provide recommendations for remediation

# VARONIS EXPRESS RISK ASSESSMENT

## WHAT WILL YOU GET?

At the end of the assessment, you'll receive a report that summarizes key findings, ranks identified weaknesses in order of risk, and provides actionable recommendations.

You'll be able to see where your strengths and weaknesses are, highlight low-hanging fruit and high-impact remediation actions.

“An awesome comprehensive document... exactly what we were looking for.”

—Bank of Puerto Rico
