Solution:
iSheriff Endpoint Security

RHWL LLP

A DESIGN FIRM FINDS ONLINE SECURITY IN THE CLOUD

Renton Howard Wood Levin LLP is an international architectural firm with more than 50 years of experience in residential and commercial building design. The firm is located in London with additional offices in Berlin and Doha. A two person IT department maintains RHWL's network security and the computer devices for all of its 85 employees.

THE BUSINESS CHALLENGE
RHWL employees are quite mobile, working in many off-site locations that are unconnected to the firm's network. When employees work out-of-network it can pose online security risks, such as increased exposure to viruses, malware, and data breaches. Dave Allerton, RHWL's IT director, needed an online security solution to address these threats by protecting his firm's devices even when they are out of network.

THE SOLUTION
Dave chose the iSheriff Cloud Security endpoint solution as his firm's first line of defense against online attacks. iSheriff Cloud Security provides a safe and secure Internet connection and protection from threats and malware. It is a cost-effective solution that dramatically simplifies the way RHWL protects itself. Additional benefits include a single management console with a single set of policies for all users, no up-front expenditures, and around-the-clock expert support.

"The iSheriff solution is a perfect fit for our firm because it is cloud-based, extending security coverage to mobile users wherever they may be," Dave said. "In addition, the system integrates seamlessly with our applications to provide complete endpoint, email and web security."

Dave Allerton
IT Director
RHWL

IMPLEMENTATION

Although securing mobile and on-premise devices can be complex and require behind-the-scenes professional expertise, the solution provides little disruption to the user, and even better, is surprisingly easy for IT professionals like Dave to deploy and use. "We implemented iSheriff Cloud Security very quickly," Dave said. "We were pleased with the support we received, and we became self-sufficient with the product in no time. Once we synchronized RHWL with the iSheriff cloud, we left the system to act on its own."

RESULTS

As expected, in addition to creating a secure online environment for mobile and on-premise users alike, Dave says iSheriff Cloud Security saves the IT department substantial time by eliminating many previous administrative tasks. "It was quite difficult to maintain policies and prevent new viruses from infiltrating our system. The cloud now takes care of this for us."
