

A MANAGEMENT CONSOLE DESIGNED FOR MANAGED SERVICE PROVIDERS (MSPs)

Multiple Products, Multiple Sites, One Console

iSheriff allows you to manage, control, report and alert on Web, Email, and Endpoint security for all of your customers. All from one single console, increasing ROI, simplifying customer management, and increasing customer satisfaction

Self Service or Managed Service

iSheriff's unique console allows for all customer types. From the customer that likes to self manage to the customer that wants everything handled for them by the MSP, the iSheriff Cloud Security Console gets the job done.

The unique multi-tenant, multi-tiered structure allows an MSP to control all of their customers, while also giving those customers that want a little more control the ability to login and manage their own account.

Running an MSP can often be described as "having a large number of irons in the fire without knowing the number of irons, and the constant chance for a few fires to go out of control." So anytime a new product is considered by an MSP, another console is always cause for concern, since it could turn into another iron, and another fire.

The iSheriff Cloud Security Console was designed and built from day one with MSPs and partners in mind. The console is designed such that an MSP can login and immediately gain pertinent information on all of their customers.

The integrated iSheriff console covers Endpoint Security, Web Security, Email Security and Email Archiving, making console bloat concerns a thing of the past. Since iSheriff Cloud Security is 100% cloud-based, there's no hardware to deploy or manage.

Every Task, Handled

Every important task can be easily handled right in the iSheriff Cloud Security Console.

- View active and trial accounts
- Create trial accounts on the fly, no waiting for approval or provisioning
- Shadow a customer account so you can see exactly what they see
- Create multiple admins with different roles
- Each customer gets their own console
- Customer information including licenses and expiration
- Ability to view reports rolled up, or on an individual customer basis
- Alerting can be configured to the customer, to the MSP, or both
- Unprecedented detailed reporting

Every Customer, Every Threat, One Console

Whether you are managing one customer or one thousand, the ability to see and react to potential threats is extremely important. The iSheriff console provides MSPs a simple rollup view of all of their customers to quickly view any potential threats or problems that need to be addressed. From out-ofdate updates to potential infections, key information is easily available in the dashboard.

But it Really Is the Little Things

Managing customers is one thing. But it's the little things that set the iSheriff Cloud Security Console apart. Little touches, like the ability to easily add your logo to the console, add notes to a customer account, easily provision a demo account for a new prospective customer, complete seamless control of all of your customers, customer shadowing, detailed licensing information for each customer, or the ability to open a support ticket right in the console that provide an experience that lets an MSP focus on servicing customers.
